

From A Humble Beginning, A Business Of Pride, Quality And Customer Commitment Has Been Established

Viking Foundry was founded in 1994. Viking Foundry was started with a 250kg Radyne furnace which was very much against the norm in those days.

Through extreme hard work and perseverance, the company has now progressed to being able to cast up to 6 000kg. Son and Father, Grant and George Estman, combined their many years of foundry experience to establish Viking, And now Father and Son Grant and Greg Estman look forward to the future of Viking

A massive boost for Viking in the beginning was their ability to cast a very diverse range of materials in small quantities in a very short turnover time. This same ability has been carried forward to today, which has always enabled great customer satisfaction. By sticking to strong foundry and business principles, Viking has grown into a business boasting four furnaces and a staff compliment of 100 people. Making it one of the largest independent owned and operated foundries in South Africa. Viking's total capacity is 200 tons per month

As it was on the first day of opening the commitment Grant Estman and his team have had towards quality and customer service remains unwavering.

Viking Foundry looks forward to the next twenty three years (and beyond) with much enthusiasm and determination...

For the past twenty years Viking Foundry has been able to offer quality and service to several large organizations such as APE Pumps, Tenova, Cementation, MMD Mining and Kamatsu. and yet have still been able to assist small companies where required. We pride ourselves on quality and delivery, as well as approachability. Breakdown castings are one of our services.
